

. Power:Bit battery power for micro:bit

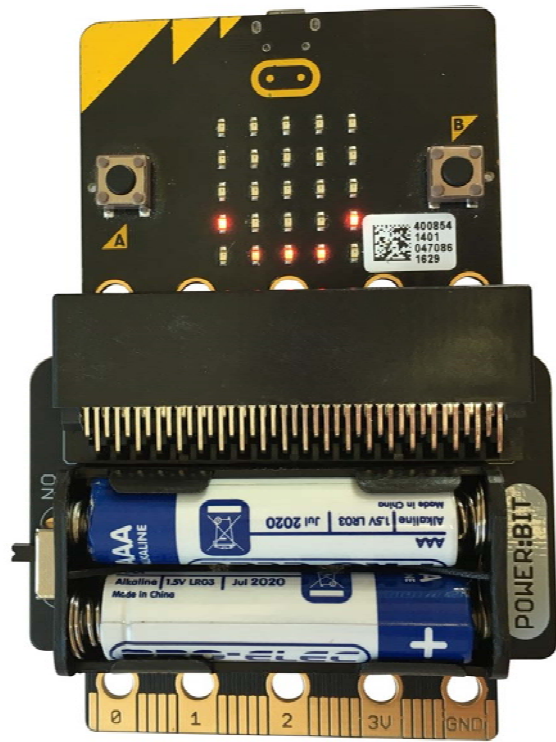

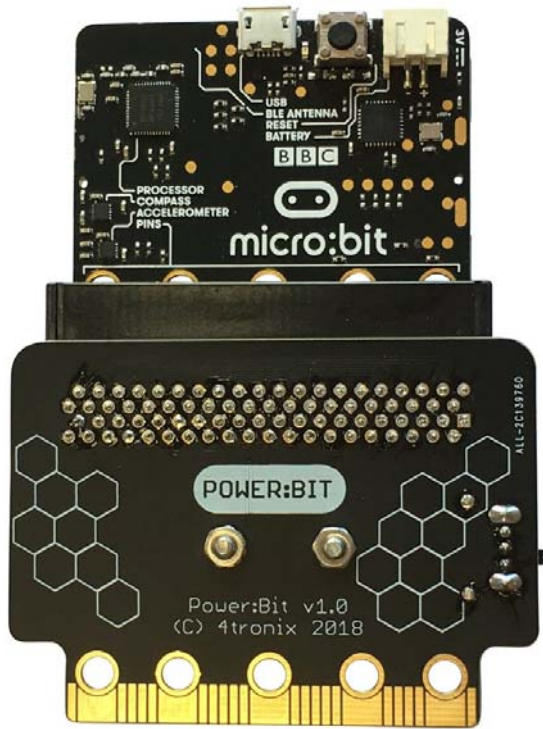

4TR PWRBIT

This neat little board makes it easy and robust to power your BBC micro:bit on the move. No wires to break or get tangled. It even includes a power switch.

The pins of the micro:bit are replicated so you can plug the unit into most accessories directly

As an added bonus, the edge connector is wired so that you can insert the micro:bit either way round so you can decide whether you want the LEDs facing forwards or backwards (or up or down).

- No soldering required
- BBC micro:bit is not included.
